

Keypasco authentication technology granted patent in Japan

Gothenburg, June 9, 2014 – Keypasco has filed patent applications in all major countries to secure its core software technology, which is the foundation for the Keypasco authentication solution. Keypasco offers an authentication solution based purely on software for secure online connections to the Cloud. The target markets identified are Online Banking (eBanking), eCommerce, online gaming, mobile payments, and more.

Japan is the third country to grant Keypasco the patent (Patent certificate number 5529775). The first two countries to grant the patent were Korea and Taiwan earlier during 2013.

The core technology and base of the cyber security solution is a device fingerprint in a two-channel structure that mitigates Phishing, Man-in-the-Middle, Man-in-the-Browser attacks, and more.

Mr. Maw-Tsong Lin, inventor of the solution and founder and CEO of Keypasco, summaries: *“This is the proof of the uniqueness of Keypasco technology, a completely new way of thinking within the authentication industry!*

More important is that the patent has now been realized as a product and also: we have our first customer with millions of users.

Our vision is to make Internet security simple and secure for every person and service provider. We make this affordable for each and every online user with our Cloud-based authentication service, which is also easy to enroll and easy to use.

We now offer an alternative to expensive hardware tokens, a software-based multi-factor strong authentication with an intelligent risk engine what continuously improves against new threats.

Keypasco’s patented technology is also proven to be applicable on smart mobile phones. We see a new trend using a mobile phone security application instead of traditional hardware tokens. It is easy to mass rollout, offer a excellent user experience and always online and available!”

Keypasco has applied for several new patents during the development of the authentication solution. This is a part of Keypasco’s ongoing strategy to offer cutting-edge technology that provides constantly updated security to its clients and customers.

About Keypasco

We are at the heart of a rapidly changing digital culture. As with all paradigm shifts, there will be new challenges. Some of the largest challenges with the Cloud services are security and integrity, crucial factors for success and sustainability. Keypasco develops a secure software-based authentication solution that is designed and customized to be used on trusted devices. Keypasco manages the software through its entire lifecycle, as well as the confidential data it contains. We deliver on society’s expanding needs for personal authentication services, identity protection within Internet banking, online gaming, eCommerce, mobile Commerce, mobile payment and eGovernment. Keypasco’s vision is to be a leading supplier of services for securing the cloud.
