Keypasco authentication technology granted patent in Taiwan

Gothenburg, October 29, 2013 – Keypasco has filed patent applications in all major countries to secure its core software technology, which is the foundation for the Keypasco authentication solution. Keypasco offers an authentication solution based purely on software for secure online connections to the Cloud. The target markets identified are Internet banking (eBanking), eCommerce, online gaming, mobile payments, eGovernment, and more.

Taiwan is the second country to grant Keypasco the patent (Patent certificate number 1413393). The first country to grant the patent was Korea earlier in 2013.

The core technology and base of the cyber security solution is a device fingerprint in a two-channel structure that mitigates Phising, Man-in-the-Middle, Man-in-the-Browser attacks, and more.

Mr. Maw-Tsong Lin, inventor of the solution and founder and CEO of Keypasco, summaries:
"We are very happy that our core technology has now been approved in Taiwan, a globally leading IT nation with advanced online services on the Internet. Our first public roll-out of the Keypasco Cloud-based authentication solution has been done in Taiwan by Gamania, a leading online gaming company that offers the solution to millions of their users. We can also see that there is a global mainstream trend of Internet security that is similar to our Keypasco solution - usage of a device fingerprint and geo-location. Still, we offer the best security, the most user-friendly experience, the most easy-to-roll-out solution, and are surely the leaders in this field. The Gamania introduction has worked extraordinarily, and that is proof that our technology works in the real world."

Keypasco has applied for several new patents during the development of the authentication solution. This is a part of Keypasco's ongoing strategy to offer cutting-edge technology that provides constantly updated security to its clients and customers.

About Keypasco
We are at the heart of a rapidly changing digital culture. As with all paradigm shifts, there will be new challenges. Some of the largest challenges with the Cloud services are security and integrity, crucial factors for success and sustainability. Keypasco develops a secure software-based authentication solution that is designed and customized to be used on trusted devices. Keypasco manages the software through its entire lifecycle, as well as the confidential data it contains. We deliver on society's expanding needs for personal authentication services, identity protection within Internet banking, online gaming, eCommerce, mobile Commerce, mobile payment and eGovernment. Keypasco's vision is to be a leading supplier of services for securing the cloud.
